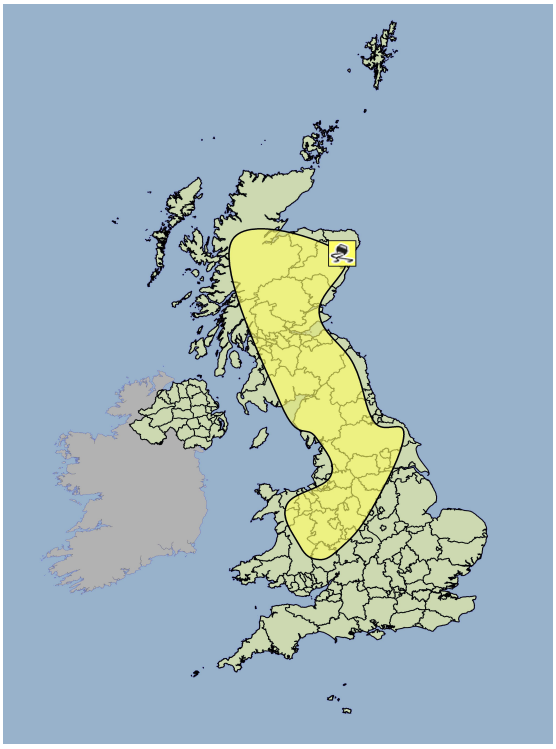
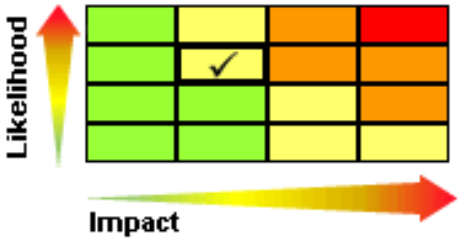
National Severe Weather Warning Service





Chief Forecasters Assessment
A short incursion of easterly winds brings just a taste of the wintry weather experienced further east and north across Europe recently. Ice is probably the main concern but a few areas might wake to see a dusting of snow. Rather more snow looks likely over the hillier areas of northeast Britain, with a few cm in places.

The Met Office have issued a **Yellow Alert** of **Ice**

Valid from **21:00 on Wed, 29th Jan 2014** until **10:00 on Thu, 30th Jan 2014**

Scattered wintry showers and falling temperatures, (along with pre-existing wet surfaces in areas which have seen a lot of rainfall recently), are likely to lead to some icy surfaces late on Wednesday and during Thursday morning. Most at risk are parts of central and eastern Scotland and the far north of England. Additionally, some areas may see slight falls of snow, most likely for eastern Scotland but also affecting parts of the Pennines, North York Moors and perhaps East Wales.

This warning, originally issued on Tuesday, has been updated to curtail its southern extent.

The public should be aware of some slippery conditions to start Thursday.
